## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Kloen et al. (US 6,229,221).

Re claim 1, Kloen et al. teach a semiconductor component, having (Fig.2):

An active circuit (4) that is provided in an active layer on the surface of a substrate (6), at least one bond pad (22) that in each case forms a bonding surface for a bond wire (24), and electrical connection (21) between the at least one bond pad and the active circuit, characterized in that the bond pad is arranged above the active layer.

Re claim 2, Kloen et al. teach the bond pad covers the active layer substantially completely.

Re claims 3-4, Kloen et al. teach the electrical connections pass through a passivation layer (20) to the active layer, wherein the passivation layer contains silicon nitride (Col.4, lines 16-18).

Re claim 5, Kloen et al. teach the bond pad is composed of aluminum (Col.4, lines 45-48).

Re claim 6, Kloen et al. teach the bond wire is composed of gold (Col.4, lines 57-58).

Re claim 7, Kloen et al. teach a method of producing a semiconductor component, having the steps of:

Providing a substrate (6) having an active layer that has an active circuit, applying a passivation layer (20) to the active layer, characterized by

the arrangement of bond pad on the passivation layer and the through-passage of electrical connection (21) from the bond pad to the active circuit.
